Ruijie **Gao**

Student · Computer Systems and Architecture

No.2006, Xiyuan Avenue, High-tech West Zone, Chengdu, 611731, Sichuan of CHINA

(+86) 133-6398-2088 | wulijerry927@outlook.com | wuliJerry | Ruijie Gao

"I am not throwing away my shot."

Education

Joint Program by University of Glasgow and UESTC

Chengdu, Sichuan.China

B.S. in Electronic Engineering Candidate

Sep. 2021 - Jun. 2025(expected)

Relevant Course

- Introductory Programming (Scored a 99)
- Microelectronic Systems (Earned an 85, for course project and presentation)
- Engineering Design and Problem-Solving Practice Problem (On YouTube, provided by CMU)
- Introduction of Computer Systems (On Coursera, provided by Princeton University)
- Algorithm (On YouTube, by official tutorial and this textbook)
- Digital Design and Computer Architecture (On Coursera, provided by UCSD)
- Combinatorics and Probability

Skills

Programming C++, Verilog, Constructing Hardware in a Scala Embedded Language(Chisel), JAVA, Scala

Tools GUN/Linux, CLI Tools, Verilator, Iverilog, Git

Front-end JavaScript, HTML5, Electron, CSS

Languages
- English Fluent, achieved 321 in GRE
- Mandarin Native

Course Work/Projects

Risc-v emulator

Repositories Link

https://github.com/wuliJerry/ysyx-workbench/tree/master/nemu

Self Project

- An 64-bit RISC-V IM emulator written in C

Morse-code Decoder

Repository Link

https://github.com/wuliJerry/MS-Lab

Course Project of Microelectronic Systems

- A Morse-decoder implementing embedded C++ based on the STM32 NUCLEO-L432KC develop board and ARM mbed environment

Dotting Printer

Course Project of Engineering Design and Problem-Solving Practice Problem

- A simple dotting printer based on LEGO EV3 processor and Robot C (A C-like embedded language)

Experience

Institute of Computing Technology, Chinese Academy of Sciences

Beijing, China

Software Engineer

Aug. 2022, Dec. 2022

- Use Chisel, a hardware description language (HDL), to design and implement a CPU core based on the RISC-V 64IM Instruction Set Architecture (ISA)
- Implement and test the various components of the CPU core, including the instruction decoder, register file, execution units, and memory interface
- Use software tools such as verilator to build a simulation framework for the CPU core, including an interactive shell that allows for single-step execution and monitoring of registers and memory state
- Write and maintain comprehensive documentation for the CPU core and its associated simulation tools

ECE Department, UESTC

Sichuan, China

Teaching Assistant

Sep. 2022 - Dec. 2022

- Assist the instructor in teaching an introductory programming course to freshman students
- Help students understand course materials and concepts through individual and group tutoring sessions, office hours, and other support activities
- Facilitate class discussions and review sessions, and provide additional explanations and examples as needed

Institute of Fundamental and Frontier Sciences, UESTC

Sichuan, China

Research Intern

Feb. 2022 - June. 2022

- Collaborated with a graduate student on a research project involving the construction and testing of transistors using Molybdenum disulfide, graphene, and Boron nitride
- Assisted in the setup and operation of laboratory equipment
- Conducted experiments to measure the flexibility and electrical attributes of the transistor materials
- Collected and analyzed data
- Interpreted results and prepared reports
